

TEXTURISED FIBRES

## LigaGrass

### THE REVOLUTION IN TEXTURISED SYNTHETIC TURF

LigaGrass is the talented all-rounder in the Polytan product range as it has FIFA Recommended 1 Star Standard approval for football pitches and is licensed by the International Hockey Federation (FIH) for use in hockey.

### PROPERTIES

- Permanent volume even when used intensively
- Quick and easy maintenance with good results
- Soft and pleasant feel

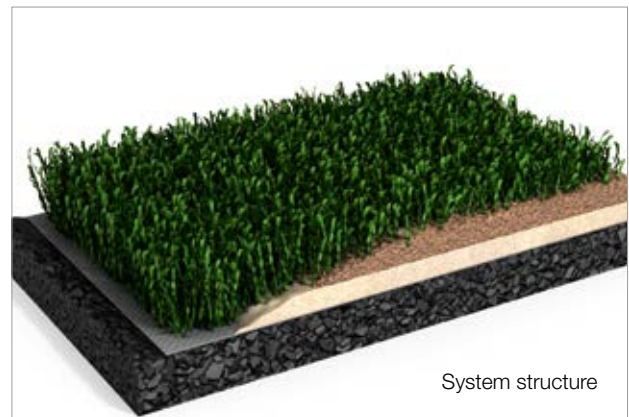

TEXTURISED FIBRES

# LigaGrass

FOOTBALL ■ HOCKEY ■ MULTISPORT

LigaGrass was used all over Germany for the „1000 miniature pitches“ project of the German FA (DFB). It has proven to be extremely hard-wearing and unbelievably soft at the same time. With this turf system, Polytan combines the advantages of a texturised football turf with the merits of monofilament fibres: thanks to its high-quality 100 % PE formulation, the high-performance football turf is considerably softer than other crimped synthetic turfs, so the players benefit from natural ball behaviour and a pleasant feel to the skin. The monofilaments are approximately 200 µm thick, ensuring the requisite strength and an outstanding level of wear resistance. At the same time, LigaGrass makes maintenance work easy due to the securely fixed sand and rubber granulate.

System structure

## AREAS OF USE

- Training facilities
- Amateur clubs
- Miniature pitches
- Multisport facilities
- School sports facilities

Fibre thickness: approx. 200 µm

Infill granules

## PRODUCT SPECIFICATIONS

- Monofilament turf fibres with approx. 200 µm fibre thickness
- Exclusive Polytan 100 % PE formulation
- Exclusive Polytan texturing process
